2 Requirements Tracebaility matrix

Requirement ID	Requirement name	Requirement description	Test Case Id	Status
FR1	Sign Up	New clients should sign up to use the system.	None	completed
FR2	Login	All users should login to use the system.	SignUp (FR1).	completed
FR3	Add item.	Adding an item in the item table in database.	Login (FR2).	completed
FR4	Edit item	Editing an item in the item table in	Login (FR2).	completed
FR5	Delete Item.	Deleting an item in the item table in database.	Login (FR2).	completed
FR6	Adding item to cart.	Adding an item in the orders table in database.	None.	completed
FR7	Removing item from cart.	Deleting an item from the orders table in database.	None.	completed
FR8	Checkout	Confirming client's items stored in orders table.	Login (FR1) and Add item to cart (FR6).	completed
FR9	Set Address	User can add the address where his order should be shipped.	Login (FR2).	completed
FR10	Add Admin	Admin can add another admins.	Login (FR2).	completed
FR011	Add Category.	Admin can add new categories.	Login (FR2).	completed
FR12	Edit Calegory.	Admin can edit categories saved on database.	Login (FR2).	completed
FR13	Delete Category.	Admin can delete categories saved on database.	Login (FR2).	completed
FR14	View orders.	Admin can view orders of clients.	Login (FR2).	completed
FR15	Accept and Deny orders.	Admin can accept and deny users' orders	Login (FR2).	completed Activate Windows
FR16	Add to Favorite.	Client can view products that he marked it	Login (FR2).	Greempleted to activate Windo

3 Test Scenarios

3.1 Test Scenario 1: login and registration

The customer in order to access anything in the system must register at first by filling the registration form he/she must enter their name,email,password,confirmation to the first password and the customer's phone number as shown in figures: 1,2. After being registered the customer will be able to login at any time and to view items,view invoice for the items selected,contact with the admin throw the live chatting and logout as shown in figures 3,4.

3.2 Test Scenario 2: Adding items to cart

The customer after logging in to the system.He/she has the ability to surf in the home page and pick the item they want add to their cart. The items that were chosen will be saved in orders table in the database. until the customer finishes surfing in the website the items will be stored in the cart till they logout or terminate the website. Also the customer has the ability we dit or delete the items selected and stored in the cart as shown in figures: 4,5,6,9.

3.3 Test scenario 3: checkout function

The customer after pressing checkout button must add the address that he/she will receive the order at. Then the customer will have the ability to see a description to the items chosen and waits for admin's approval.until the admin accepts the request the status will remain pending as shown in figure 7,8. More over, the admin side he has the ability to accept or delete the request and print the invoice of this specific order as shown in figures: 8,20.

3.4 Test scenario 4: Inserting and deleting functions from admin's side

- 1. The admin at his panel has the ability to add/edit and delete the category list that contains list of artists.
- 2. The admin has the ability to add another admin.
- 3. The admin has the ability to add items to the system, edit in them or delete them.
- 4. The admin has the ability to delete any one from the distributors, subscribers contacts and orders as shown in figures: 26,29,30,31.

3.5 Test scenario 5: live chat system

The customer has the ability to communicate with the admin to ask about anything and the admin suppose to respond quickly. Also when the order being accepted a forward message will be sent to the customer confirms that the order will be shipped in few days as shown in figure: 15.

3.6 Test scenario 6: search functionality

The customer and the admin has the ability to search about any item using the items' name as shown in figures: 16,17.
